EDUCATION

Rice University

BS in Computer Science

GPA: 3.81/4.0

May 2027

Houston, TX

Relevant Coursework: Data Structures & Algorithms, Computer Systems, Concurrent Program Design, Program Design, Reasoning About Algorithms, Linear Regression

EXPERIENCE

Software Engineer Intern

May 2026 – Aug 2026

Nextdoor

Dallas, TX

- Designed and shipped a monitoring system for Nextdoor's Streaming ORM, instrumenting **8+ metric dimensions** across production hot-path code and redesigning Datadog dashboards to improve on-call debugging and system visibility.
- Identified production metrics quality issues by tracing cost spikes to a regex bug, cutting **observability costs by 50%** through a carefully staged rollout.
- Designed an error-capture system for latency-sensitive hot-path code, owning the system architecture from design doc through implementation.

Software Engineer Intern

Oct 2025 – Jan 2026

yAI

Houston, TX

- Led a large-scale architecture refactor, migrating **70%+** of the codebase to a modular microservices design with SOLID principles, improving system reliability and maintainability.
- Built production CI/CD infrastructure with automated testing frameworks in Python, achieving **80%** code coverage and **99.9%** deployment reliability.

Software Engineer Intern

May 2025 – Aug 2025

Curriculum Associates

Boston, MA

- Designed a high-performance query engine processing **100,000+** data points, solving latency and scalability challenges for a platform serving **500+** engineers and improving productivity by **50%**.
- Led the migration of mission-critical features to React.js, improving UI responsiveness and system maintainability.
- Won 1st place** in a company-wide hackathon by building an AI-driven transcript generator using Python and NLP.

Software Engineer Intern

May 2024 – Aug 2024

Curriculum Associates

Boston, MA

- Collaborated with cross-functional engineering and product teams in an Agile environment, delivering API optimizations and resolving critical bugs for **500+** daily active users.
- Identified repetitive manual processes and built Python automation tooling from scratch, eliminating **5+ hours** of overhead per sprint cycle.

PROJECTS

Adapt Language Learner | *TypeScript, React, Node.js, Supabase, PostgreSQL*

- Architected a real-time, full-stack translation engine for wearable tech, designing end-to-end system architecture, API layer, and a PostgreSQL data pipeline for automated feature extraction.

RESEARCH & PUBLICATIONS

Why It Failed: A Benchmark to Evaluate Interpretability

LM4UC Workshop, AAAI Conference on Artificial Intelligence (AAAI-26)

- Developed a Python-based evaluation framework using PyTorch and Scikit-learn to test whether interpretability methods can explain LLM failures; demonstrated near-chance probe performance ($AUC \approx 0.5$), revealing a fundamental gap in current methods. Published at AAAI-26.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, Go, R

Frameworks & Data: React.js, Node.js, Next.js, Django, PostgreSQL, PyTorch, Scikit-learn

Infrastructure: Docker, Kubernetes, AWS, CI/CD, Jenkins, GitHub Actions, Git, Datadog

AI & Systems: LLMs, Agentic Workflows, MCP, RAG, Distributed Systems, System Design
